I want to use the library of slenium to run some kind of program in backstage and get the information from the website in realtime and from those data building a dynamic graph.

```
In [3]:  from selenium import webdriver
         browser = webdriver.Chrome()
         browser.get("http://www.baidu.com")
         browser.find_element_by_id("kw" ).send_keys( "selenium")
         browser.find_element_by_id("su").click()
```
